K2

活動名稱

Explore nature – a trip to the wetland park

活動目標

- Learn the names of plants and animals in Hong Kong Wetland Park
- Children can use multiple senses to explore and observe the plants and animals in the garden, thus enhancing their observation skills.
- Cultivate children's attitude of caring for the plants and animals in the park, such as: keeping quiet when bird watching and not touching the animals in the park.

活動簡介

The Wetland Park is the largest park in Hong Kong. Children participating in the activity can follow their teachers along a designated route to explore and learn about different migratory birds, mangrove plants, and animals, such as the saltwater crocodile "Bei Bei," mudskippers, fiddler crabs, black-faced spoonbills, and avocets. During the visit, children must complete a "Wetland Park Activity Report" to gain a deeper understanding of the park's flora and fauna.
